

# RYNO DECK

## RynoDeck makes deck building quick, clean and easy, without compromising strength and safety.

### IDEAL FOR USE IN:

- Gardens
- Roof areas, terraces, balconies, greenroofs
- Structural podium decks
- Communal/public areas
- Walkways/wheelchair access ramps
- Temporary decking areas
- Patio overlays/renovations

### QUICK TO INSTALL

Thanks to the simple design of RynoDeck, creating a level decking surface on an uneven ground couldn't be easier. Installation is quicker and cleaner than traditional methods. It requires no time-consuming preparation and no special tools or skills. This fast, efficient method also creates a ready-made space for drainage, cables and pipes to run beneath the deck.

### EASY TO ADJUST

Each RynoDeck lightweight pedestal is easily adjustable, even when holding the bearer. Their built-in self-levelling head will compensate for gradients of up to 10.5%, so simply ignore undulations and let RynoDeck do the hard work.

### EXTREMELY VERSATILE

RynoDeck can be installed on almost any surface. Unlike existing methods, RynoDeck gives you the flexibility to extend or reduce your decked area at the drop of a hat. They easily compensate for uneven surfaces and slopes, and can eliminate the need for extensive ground preparation. Manufactured from solid polypropylene, and with a broad solid base, RynoDeck has the highest compression tolerance of any pedestal in the world, withstanding in excess of 2100kg of compression.

### LONGER LIFESPAN

Unlike traditional timber decking framework, RynoDeck will never rot. It also extends the lifespan of decking boards by keeping them up off the ground, away from moisture. As the pedestals have no abrasive edges and are evenly spaced to spread load across the surface below, membranes are protected, extending their lifespan too. It's win-win with RynoDeck.

Each pedestal comes with a 10 year guarantee.

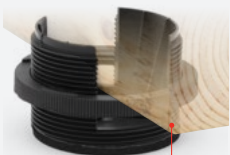

# RYNO DECK

## DECKING SUPPORT SYSTEM

Gone are the days of rotting timber framework, and extensive ground preparation. RynoDeck with its self-levelling head creates perfectly level, long-lasting decking in half the time — including on uneven ground.

## RYNODECK CRADLES

## SIMPLE DESIGN

This is the straightforward answer to low height uses. Shimms are available in 2mm and 5mm for fine adjustment.

## SELF-LEVELLING BEARER SUPPORT HEAD

Due to its innovative self-levelling head design, Ryno Deck has the fastest installation time of any pedestal system available.

- Utilises the 'ball & socket' joint concept to allow a free moving captive head
- Provides slope correction of up to 10.5% (6°)
- Paving or decking is laid onto the pedestals without having to manually adjust slope correction. This results in significant time savings and a perfectly level finished area
- Two sizes available to accommodate bearer thicknesses up to 100mm
- Alternative head available to support paving.

## WIDE SUPPORTING BASE

Pedestals are loose laid and do not require fixing to the floor.

- Large diameter spreads loads and ensures stability
- Prevents damage to roof membranes and other substructures
- Can be fixed down into concrete, or loose laid on roof membranes etc.
- Incorporates water drainage holes to prevent moisture build-up.

## RYNODECK ADJUSTABLE PEDESTAL

## OPTIONAL DECK TILE HEAD

The Self-Levelling Bearer Support Head is replaceable with a Deck Tile Head, if you wish to lay Decking Tiles.

## HEAD LOCKING RING

This optional extra locks the head in the level position, ideal for laying decking onto a totally flat surface.

## ADJUSTABLE THREADED SECTION

This heavy grade threaded section allows you to adjust the height in minute increments, within the given range. It's easy to adjust, simply grab and twist — easy.

## HEIGHT EXTENSION COLLAR

A very simple design with a single 'click' motion to attach, these extension collars build up the pedestals in 100mm increments.
